: Seed Mixture for Reclamation
:
: 43 CFR 3802.3 (h)

Dear Mr. Shajary:

This letter is in response to your recent telephone conversation, on August 17, 2007, with Angela Wadman regarding reclamation seed mixture for UTU-69850, Georgia Pacific Corporation, Eagle Canyon Mine, in Emery County, Utah.

The seed mixture was developed and reviewed by our specialists. For the best reclamation results, seeding should be done during the months of October through February using the following mix of pure live seed (pls). There shall be no primary or secondary noxious weed seed in the seed mixture.

Plant Common Name	Plant Scientific Name	Pounds Per Acre*
Grasses		
Indian ricegrass	<i>Oryzopsis hymenoides</i>	2
Needleandthread	<i>Stipa comata</i>	1
Galleta grass	<i>Hilaria jamesii</i>	1
Shrubs & Forbs		
Shadscale	<i>Atriplex confertifolia</i>	1/2
Fourwing saltbush	<i>Atriplex canescens</i>	1/2
Winterfat	<i>Krascheninnikovia lanata</i>	1/2
Yellowbee plant	<i>Cleome lutea</i>	1/2
Scarlet globemallow	<i>Sphaeralcea coccinea</i>	1
Total		7
(* broadcasting seed will require to increase pounds per acre by 50 percent)		

If the seed is broadcast, the pounds per acre in the above seed list shall be increased by 50 percent. The BLM is to be notified a minimum of seven (7) days prior to the seeding of the project. Reseeding may be required if a satisfactory stand is not established. The evaluation of the success shall not be made before the completion of the fifth (5) growing season and/or after 75 percent of the vegetation becomes established.

Please contact Angela Wadman at (435) 636-3600 if you have any questions.

Sincerely,

/s/ Roger L. Bankert

Roger Bankert
